

Identified challenges for Africa

- **Inclusivity:** Progressive policies but limited implementation.
Exclusion can also be masked as inclusion through progressive policies
- **Scalability:** Is becoming an issue due to high population growth (immigration due to political instability), limited infrastructure (including funding) and teacher shortages (with relevant learning areas).
- **Sustainability:** Is talked about in terms of social responsiveness and adaptability to evolving educational needs but there is little understanding of how to get ODL systems to be financially viable and environmentally considerate.

Goals for the Africa task force

- **Conduct collaborative research** to understand Inclusion, Scalability and Sustainability for education in Africa, and advocate towards their implementation and continuity.
- **Identify target audiences:** Civil society, religious, political, diplomatic, business and educational institutions in Africa in collaboration with ICDE
- **Develop key messages** with regional relevance together with task force members
